

Introducing the newest material in our **Choose Green** sustainable packaging line

-  **Post Consumer Recycled Plastics or PCR** are an eco friendly way to repurpose materials that would otherwise be **disposed** of in landfills or our **environment**
-  PCR plastics offer up to a **27% reduction in CO2** emissions over the life of your packaging after just the first round of recycling
-  PCR plastics offer an estimated **88% energy savings** when compared to an equivalent **virgin plastic**
-  PCR plastics such as **HDPE** can be **recycled up to 10 times** without substantial reduction in **material properties**
-  PCR plastics can be **blended** with virgin resin to achieve **specific material properties**
-  Modern improvements in **recycling technology** allow for **greater efficiency**, cleaner raw materials, and even more **beautiful packaging**
-  PCR plastics are both **GRAS** (Generally Regarded As Safe) certified and **FDA approved** for food and cosmetic contact
-  PCR plastics **allow for** the same style and **complexity in decoration** as virgin plastics

Express Tubes is excited to present **Post Consumer Recycled** Tubes, Bottles, and Jars

25% to 100%
PCR Available
